

INNOVATION DRIVEN

High precision Magnetometrics

- UXO Research
- Mineral exploration
- Treasure hunting

High precision Electromagnetics

- Mineral exploration
- Up to 600 meters penetration

BOLD EAGLE

THE EDGE

The team assembled behind Eagle geophysics are experts in different fields. From geophysicist, electronic engineers to helicopter pilot, they have built innovative airborne technologies, flown in different countries and environment for various client's needs. This broad experience has permitted to create unique powerful equipment with the best resolution available on the market.

“Mapping what really matters”

WHITE EAGLE PLATFORM

The only magnetometric platform in the world with such resolution. It is flown to map and precisely locate UXO (unexploded ordnance). We also use it to find old boat wrecks offshore. The white eagle and bold eagle are also ideal to explore complex geological environment such as kimberlites and gold related structures.

EAGLE EYE

Eagle eye is the newborn survey platform of Eagle geophysics Inc. It was built in cooperation with different experts in exploration. The idea was to build a smarter system knowing that 1/10 000 conductors actually have economics minerals associated with it¹. We focused our efforts on having the most stable and rigid platform with the best data processing to increase our odds of mapping the actual resources.
